Application

Gamma 40/50/60/70 digital multimeters are suited for universal, general applications in the electrical and electronics radio and television service, training and education.

Product Features

Root mean square value with distorted wave form (for 616 only).	Measuring principal employed permits the measurement of root mean square value (TRMS) of AC quantities regardless of wave form.	Auto Power OFF (APO)	Multimeter has a default auto power off function. If the Meter is idle for more than the 15 minutes, the meter automatically turns the power off.
Dual Display	The dual display included a main display and a sub display. Main display always display current measurement value where as sub display shows some special measurements like maximum/minimum value, reference value for relative value measurement. Also dual display is used to display at the same time Voltage/ Current with Frequency, Frequency with Duty cycle etc.	Hold	By pressing the HOLD/ON key, the currently displayed Measurement value can be held and "HOLD" is simultaneously displayed.
Peak Hold	Minimum and maximum Peak values are hold in VAC, mAAC, AAC.	Relative measurement (REL)	By pressing and holding PEAK and then pressing AUTO/MAN key, the zero correction is made and relative Value is measured. It is not active in Hz/ Duty functions.
MIN/MAX Function	By pressing min/max button instrument will start recording minimum and maximum readings. All functions can measure MIN/MAX except Hz/Duty functions.	Automatic blocking System(ABS)	The automatic terminal blocking system prevents incorrect connection of test lead and incorrect selection of measurement quantity, which provide safety to the user.
Temperature measurement	Multimeters measures temperature with "K" type thermocouple (NiCr - Ni) sensor in the range from 0C to 1300 C.	Auto and Manual ranging modes	In AUTO ranging mode the instrument automatically selects the range with best resolution depending on the applied input. In manual ranging mode range is user selectable using AUTO/MAN Key. Note: For AAC, ADC, Temperature, Continuity, Diode and Duty cycle measuring range is manual. No AUTO range selection is possible.
Indication of negative values on the analog scale.	When measuring DC quantities negative values are shown on the analog scale so that variations of the measured value can be observed at the Zero point.	Diode and Continuity testing	This provides for the testing of the polarity of diodes, as well as inspection for short -circuits and circuit interruptions. In addition to the display, resistance of less than 30Ω (approx.) Are Indicated with an acoustic signal.
Analog Scale	Analog scale that updates at the rate 28 times/sec to observe	Backlit	Large white LED backlit to work in poorly light area.
Protection from dust and water	Instrument: IP 52 For terminals: IP20 as per IEC60529.	Continuous ON mode	In this mode, AUTO POWER OFF is disabled.
Applicable International Safety standards	1000 V CAT III/600V CAT IV as per International Safety standard IEC 61010-1- 2010 and IEC 61557
